

FST200 Series Manual Book

1. Preface

Thank you for choosing FST200 series high-performance, simple frequency converter. The actual picture in this operation manual is for convenience of explanation, and be slightly different from the product. Due to product upgrades, it may also be slightly different. Please refer to the actual product. Please pay attention to hand over this user manual to the end user, and keep it properly for future inspection and maintenance.

If you have any questions, please contact our company or agent in time, we will serve you wholeheartedly.

2. Nameplate Description

FST200 - 2S - 0.75G
① ② ③

Name	Mark	Description	Detail
AC Drive series	①	FST200	Series Name
Voltage level	②	Voltage level	2S:Single-phase 220V Range: -15% ~20% 4T:Three-phase 380V Range: -15 ~20%
Adaptable power	③	Adaptable motor power(KW)	0.4KW~11KW

MODEL: FST200-2S-0.75G

INPUT: AC 1PH 220V 50/60Hz 8.2A

OUTPUT:AC 3PH 220V(0~3200Hz)4.0A

S/N : BA0IB000001

MADE IN CHINA

Shenzhen FSTsystem technology Co.,Ltd.

————— Model

4.Keyboard Description

5. General technical specifications

Electrical specifications	
Input voltage	single/three phase 200–240V, three phase 380–440V
	fluctuation±10%, imbalance<3%
Input frequency	50/60Hz ± 5%
Output voltage	0V~input voltage
Output frequency	0~500Hz
Performance	
Overload capacity	60s for 150% of the rated current, 10s for 180% of the rated current
Frequency Control	Sensorless vector control (SVC), V/F control
Command control mode	Operation panel control, Terminal control, Communication control
Speed control mode	Digital setting, Analog setting, Comms setting
Speed control resolutions	Digital setting: 0.01 Hz ; Analog setting: maximum frequency x 0.1%
Speed stability accuracy	SVC: ±0.5%
Speed adjustment range	SVC: 1:100
Torque response time	SVC: <200ms
Startup torque	SVC: 0.5Hz: 180%
Torque control accuracy	±5%
Motor parameter learning ability	When high torque is required on site, first input parameters such as motor power and current in group P1. Dynamic or static motor parameters can be set in p1-37. After self-learning, the motor output torque and response ability will be stronger.
Speed tracking restart	This machine has the motor speed tracking ability of simple software detection mode, when used, it is recommended to input the motor rated power and rated current parameters first.
Individualized functions	
Programmable I / O terminal	input & output terminal function can be edited
Process PID regulation function	Built in process PID module
Simple PLC function	Built in simple PLC module, which can realize timing and multi-stage frequency output
Textile swing frequency function	Build-in textile swing frequency function
Fixed length control function	Build-in fixed length control modular
Communication protocol	MODBUS
Protection Functions	

Over-voltage lost speed control	Bus voltage is automatically controlled to prevent overvoltage fault caused by deceleration power generation of large inertia load
Automatic current limiting protection	The output current is automatically limited to prevent heavy load overcurrent fault, and the heavy load has the performance of over-current speed limit of excavator
Input and output phase loss protection	Automatic detection and alarm function of output phase loss
Process PID setting and feedback loss detection	Process PID automatically identifies whether the given and feedback are lost, and the loss alarm function
Output short circuit protection	Effective protection function of output short circuit to ground
Output phase to phase short circuit protection	Effective protection function of output phase to phase short circuit
Module overheating protection	When the load is too heavy, fan damaged or cooling air duct blocked, Real time monitor the module temperature for hot spot protection
Fan start-up temperature control	The fan only rotates when the frequency converter is running. When the temperature is high, the fan will delay shutdown
I/O Features	
External analog power supply	+10V, Load capacity 100mA, which is used for external analog power supply with short-circuit protection
External digital power supply	+24V, Load capacity 200mA
Analog input	AI1: Voltage 0-10V and Current 0-20mA can be set and select input way by the software menu
Analog output	AOV: 0-10V, AOI: 0-20mA, 4-20mA can be output through parameter setting
Digital input	DI1-DI5, DI5 can be high speed pulse, 0-50KHZ
Digital output	FM digital output, high-speed pulse output, 0-50KHZ
Relay output	TA/TB/TC: contact capacity 250VAC/3A or 30VDC/1A (On-off timing relay setting function)
MODBUS-RTU Comms	A+, B- terminal match international standard MODBUS-RTU protocol format
Extended keyboard (optional)	Rj45 terminal can connect with an external keyboard, and can adjust speed or monitor or control parameters with external keyboard
Operation and display	
LED display	5 digit LED
	Setup frequency/output frequency/output voltage/output current/motor speed/output torque/Switching value terminal/status parameter/programming menu parameter and fault code, etc
Indicator	3 unit indicators, 3 status indicators
Environment	
Ambient temperature	0°C~+40°C, Maximum temperature 50°C, The change of air temperature is less than 0.5 °C / min
	Derated for use at 40-50 °C: derated the output current by 2% each exceeds 1 °C
Storage temperature	-20°C~+55°C

Installation environment	Indoor, prevent from direct sunlight, dust, corrosive gas, combustible gas, oil mist, water vapor, dripping water or salt, etc
Altitude	Below 1000 m (de-rated 1% for each 100 m higher), Maximum 3000m
Humidity	Maximum relative humidity 95%, non-condensing
Vibration	3.5m/s ² at 2Hz~9Hz, 10m/s ² at 9Hz~200Hz (IEC60721-3-3)
IP level	Ip20
Pollution level	Class 2 (dry, non-conductive dust pollution)

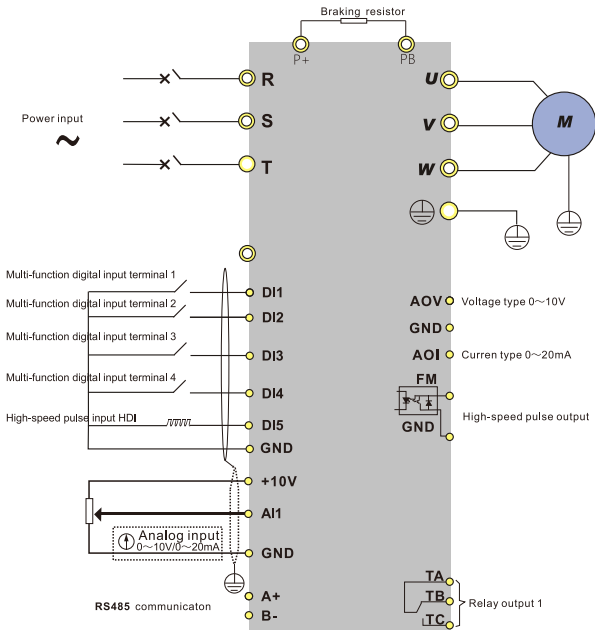

6.External keyboard dimensions

7.Description of the main circuit terminals of the inverter

Terminal mark	Name	Description
R、S、T	Power input terminal	S, T : single-phase 220V AC input power supply ; R, S, T : three-phase 380V AC input power supply
P+ , PB	Brake resistor connection terminal	Connect to the braking resistor
U、V、W	VFD output termina	Connect to a three-phase motor
⊕	Ground terminal	Ground terminal

8. Wiring of inverter control circuit

Note: All FST200 series inverters have the same wiring method for the control circuit. The above figure shows the wiring diagram of the three-phase 380V inverter. Terminal[®] represents the main circuit terminal, and [○] represents the control circuit terminal.

9. Function description of control terminal

Category	Terminal symbol	Terminal Name	Function Description
Power supply	+10V-GND	External+10V power supply	Provide +10V power supply to the outside, the maximum output current:100mA(with short-circuit protection), generally used as an external potentiometer working power supply, potentiometer resistance range: 1kΩ ~ 5kΩ
	+24V-GND	External+24V power supply	Provide +24V power supply to the outside, generally used as the working power supply of digital input and output terminals and external sensor power supply Maximumoutputpower:200mA
Analog input	AI1-GND	Analog input terminal 1	1. Input range : DC 0V~10V/0mA~20mA, determined by P4-39 2. Input impedance: 22kΩ for voltage input , 500Ω for current input

Analog output	AOV-GND AOI-GND	Analog output	Input voltage range:0V~10V Output current range: 0mA~20mA,4~20mA (P5-23 optional)
Digital input	DI1-GND	digital input 1	1. Input impedance: 1kΩ 2. Voltage range for level input: 5V~30V In addition to the characteristics of DI1 to DI4, DI5 can also be used as a high-speed pulse input channel. Highest frequency:20kHz
	DI2-GND	digital input 2	
	DI3-GND	digital input 3	
	DI4-GND	digital input 4	
	DI5-GND	High-speed pulse input terminal	
Digital output	FM-GND	High-speed pulse output	Constrained by function code P5-00 "FM terminal output mode selection",when used as high-speed pulse output, the maximum frequency is 20 kHz; when used as open-collector output, it is the same as DO1 specification .
Relay output	TA-TB-TC	Relay contact output	Contact drive capability: AC250V, 3A DC30V, 1A TA, TB: normally closed TA, TC: normally open
communication signal	A+ B-	RS-485 communication	A+ is differential positive input, B- is differential negative input

10.Signal input terminal wiring instructions

Because weak analog voltage signals are particularly susceptible to external interference, shielded cables are generally required, and the wiring distance should be as short as possible, not exceeding 20m. In some occasions where the analog signal is seriously interfered, a filter capacitor or a ferrite magnet should be added on the analog signal source side.

11. Parameter summary table

Function code	Name	Setting Range	Factory default	DEC address
Group P0 Basic Parameters				
P0-01	Motor control mode	0:Speed sensorless vector control 2 : V / F control	2	61441
P0-02	Command source selection	0:Panel command channel (LED off) 1:Terminal command channel (LED on) 2:Communication command channel (LED flashing)	0	61442
P0-03	Main frequency sourceX selection	0:Digital setting (preset frequency P0-08,UP/DO WN can be modified, no memory when power off) 1:Digital setting (preset frequency P0-08,UP/DOW N can be modified, no memory when power off) 2 : AI1 3 : AI2 local potentiometer 4: AI3 external keypad potentiometer 5: HDI pulse setting (DI5) 6: Multi-step instruction 7: Simple PLC 8: PID 9: Communication given	3	61443

P0-04	Auxiliary frequency source Y selection	Same as P0-03 (main frequency source X selection)	0	61444
P0-05	Frequency source Y when superimposed range selection	0: relative to the maximum frequency 1: Relative to frequency source X	0	61445
P0-06	Frequency source Y range	0%~150%	100%	61446
P0-07	Frequency source superposition method selection	Unit's Bit: frequency source selection 0: main frequency source x 1: X and Y operation (the operation mode is determined by ten digits) 2: Switching between X and Y 3: Switching between X and "X and Y operation" 4: Switching between Y and "X and Y operation" Ten bits: X and Y operation relationship of frequency source 0: X + Y 1: X - Y 2: Maximum 3: Minimum	00	61447
P0-08	Preset frequency	0.00Hz~Maximum frequency (P0-10)	50.00Hz	61448
P0-09	Operation direction	0: same direction 1: opposite direction	0	61449
P0-10	Maximum frequency	50.00Hz~320.00Hz (P0-22=2) 50.0Hz~3200.0Hz (P0-22=1)	50.00Hz 50.0Hz	61450
P0-11	Upper limit frequency source	0: Set by P0-12 1: AI1 2: AI2 local potentiometer 3: AI3 external keyboard potentiometer 4: HDI pulse setting 5: Communication setting	0	61451
P0-12	Upper limit frequency	Lower limit frequency P0-14~maximum frequency P0-10	50.00Hz	61452
P0-13	Upper limit frequency offset	0.00Hz~Maximum frequency P0-10	0.00Hz	61453
P0-14	Lower frequency	0.00Hz~upper limit frequency P0-12	0.00Hz	61454
P0-15	Carrier frequency	0.5kHz~16kHz	Model is determined	61455
P0-16	The carrier frequency is adjusted with temperature	0: No 1: Yes	1	61456
P0-17	Acceleration time 1	0s~6500s (P0-19=0) 0.00s~6500.0s (P0-19=1)	Model is determined	61457
P0-18	Deceleration time 1	0.00s~650.00s (P0-19=2)		61458
P0-19	Acceleration and deceleration time unit	0: 1 second 1: 0.1 seconds 2: 0.01 seconds	1	61459

P0-21	Auxiliary frequency source offset frequency when superimposed	0.00Hz ~ Maximum frequency P0-10	0.00Hz	61461
P0-22	Frequency command resolution	2:0.01Hz	2	61462
P0-23	Digital setting frequency stop memory	0:no memory 1:memory	1	61463
P0-25	Acceleration and deceleration time reference frequency	0:Maximum frequency (P0-10) 1: setting frequency 2: 100 HZ	0	61465
P0-26	Frequency command UP/DOWN reference during operation	0: Running frequency 1: set frequency	0	61466
P0-27	Command source binding frequency source	Units: keyboard Tens: terminals Hundreds: Communication Protocol 0: no binding 1: by Digital setting 2: AI1 3: AI2 built-in potentiometer 4: AI3 external keyboard potentiometer 5: HDI Pulse setting (DI5) 6: Multi-command 7: Simple PLC 8: PID 9: Communication setting	0000	61467
Group P1 Motor parameters				
P1-00	Motor type selection	0:Ordinary asynchronous motor 1: Variable frequency asynchronous motor	0	61696
P1-01	Motor rated power	0.1~1000KW	Model is determined	61697
P1-02	Motor rated voltage	1~2000V	Model is determined	61698
P1-03	Motor rated current	0.01~100A	Model is determined	61699
P1-04	Motor rated frequency	0.01Hz ~Maximum frequency	Model is determined	61700
P1-05	Motor rated speed	1~6553rpm	Model is determined	61701
P1-10	Asynchronous motor no-load current	0.01A~P1-03	Tuning parameters	61706
P1-37	Tuning selection	0:no operation 1: Asynchronous motor partial standstill tuning 2:Asynchronous motor complete dynamic auto-tuning 3: Asynchronous motor complete static auto-tuning	0	61733
Group P2 vector parameters				
P2-00	Speed loop proportional gain 1	1~100	30	61952
P2-01	Speed loop integral time 1	0.01~10.00s	0.50s	61953
P2-02	Switching frequency 1	0.00~P2-05	5.00Hz	61954
P2-03	Speed loop proportional gain 2	1~100	20	61955

P2-04	Speed loop integral time 2	0.01s~10.00s	1.00s	61956
P2-05	Switching frequency 2	P2-02~Maximum frequency	10.00Hz	61957
P2-06	Vector control slip gain	50~200%	100%	61958
P2-07	Velocity loop filter time constant	0.000s~1.000s	0.050s	61959
P2-09	Torque upper limit source in speed control mode	0: Function code P2-10 setting 1: AI1 2: AI2 3: Keypad potentiometer 4: HDI pulse setting 5: Communication setting 6: MIN(AI1, AI2) 7: MAX (AI1, AI2) The full scale of options 1-7 corresponds to P2-10	0	61961
P2-10	Digital setting of upper limit of torque under speed control mode	0.0%~200.0%	150%	61962
P2-13	Excitation adjustment proportional gain	0~60000	2000	61965
P2-14	Excitation adjustment integral gain	0~60000	1300	61966
P2-15	Torque adjustment proportional gain	0~60000	2000	61967
P2-16	Torque adjustment integral gain	0~60000	1300	61968
P2-17	Velocity Loop Integral Properties	Bit: integral separation 0: Disabled 1: Enabled	0	61969
Group P3 V/F control parameters				
P3-00	V/F curve setting	0: Linear V/F 1: Multi-point V / F 2: Square V/F 3: 1.2 power V/F 4: 1.4 power V/F 6: 1.6 power V/F 8: 1.8 power V/F	0	62208

12. Fault alarm and countermeasures

FST200 inverter has a total of 32 warning messages and protection functions. Once a fault occurs, the protection function will act, the inverter will stop output, the inverter fault relay contact will act, and the fault code will be displayed on the Inverter display panel. Before seeking service, users can conduct self-examination according to the prompts in this section, analyze the cause of the fault, and find out the solution. If it belongs to the reasons described in the dotted box, please seek service and contact the agent of the inverter you purchased or directly contact our company. Among the warning messages, Err22 is a hardware overcurrent or overvoltage signal. In most cases, a hardware overvoltage fault causes Err22 to alarm.

Fault name	Fault code	Troubleshooting	Troubleshooting Countermeasures
Inverter unit protection	Err01	1:The inverter output circuit is short-circuited 2: Motor and inverter wiring is too long 3: Module overheating 4: The internal wiring of the inverter is loose 5: The main control board is abnormal 6:The driver board is abnormal 7:The inverter module is abnormal	1: Eliminate peripheral faults 2: Install reactor or output filter 3: Check whether the air duct is blocked, whether the fan is working normally and eliminate the problem 4: Plug in all the cables 5: Seek technical support 6: Seek technical support 7: Seek technical support
Acceleration overcurrent	Err02	1: There is grounding or short circuit in the output circuit of the inverter 2: The control mode is vector and no parameter identification is performed 3: The acceleration time is too short 4: Manual torque boost or V/F curve is not suitable 5: The voltage is low 6: Start the rotating motor 7: Sudden load during acceleration 8: Inverter selection is too small	1: Eliminate peripheral faults 2: Perform motor parameter identification 3: Increase the acceleration time 4: Adjust manual lifting torque or V/F curve 5: Adjust the voltage to the normal range 6: Select speed tracking to start or wait for the motor to stop before starting 7: Cancel sudden load 8: Select the inverter with a larger power level
Deceleration overcurrent	Err03	1: There is grounding or short circuit in the output circuit of the inverter 2: The control mode is vector and no parameter identification is performed 3: The deceleration time is too short 4: The voltage is low 5: Sudden load applied during deceleration 6: No braking unit and braking resistor are installed	1: Eliminate peripheral faults 2: Perform motor parameter identification 3: Increase the deceleration time 4: Adjust the voltage to the normal range 5: Cancel sudden load 6: Install braking unit and resistor

Fault name	Fault code	Troubleshooting	Troubleshooting Countermeasures
Constant speed overcurrent	Err04	1: There is grounding or short circuit in the output circuit of the inverter 2: The control mode is vector and no parameter identification is performed 3: The voltage is low 4: Is there a sudden load during operation? 5: Inverter selection is too small	1: Eliminate peripheral faults 2: Perform motor parameter identification 3: Adjust the voltage to the normal range 4: Cancel sudden load 5: Use a frequency converter with a larger power level
Acceleration overvoltage	Err05	1: Input voltage is too high 2: During the acceleration process, there is an external force that drives the motor to run 3: Short acceleration time 4: No braking unit and braking resistor are installed	1: Adjust the voltage to the normal range 2: Cancel external power or install braking resistor 3: Increase the acceleration time 4: Install braking unit and resistor
Deceleration overvoltage	Err06	1: Input voltage is too high 2: During the acceleration process, there is an external force that drives the motor to run 3: Short acceleration time 4: No braking unit and braking resistor are installed	1: Adjust the voltage to the normal range 2: Cancel external power or install braking resistor 3: Increase the acceleration time 4: Install braking unit and resistor
Constant speed overvoltage	Err07	1: Input voltage is too high 2: During the operation, there is an external force that drives the motor to run	1: Adjust the voltage to the normal range 2: Cancel external power or install braking resistor
Control power failure	Err08	1: The input voltage is not within the specified range	1: Adjust the voltage to the range required by the specification
Undervoltage fault	Err09	1: Instantaneous power failure 2: The input voltage of the inverter is not within the range required by the specification 3: The bus voltage is abnormal 4: The rectifier bridge and buffer resistance are abnormal 5: The driver board is abnormal 6: The control board is abnormal	1: Reset fault 2: Adjust the voltage to the normal range 3: Seek technical support 4: Seek technical support 5: Seek technical support 6: Seek technical support
Inverter overload	Err10	1: Whether the load is too large or the motor is blocked 2: Inverter selection is too small	1: Reduce the load and check the motor and mechanical condition 2: Select an inverter with a larger power register
Motor overload	Err11	1: Is the setting of the motor protection parameter P9-01 appropriate? 2: Whether the load is too large or the motor is blocked 3: Inverter selection is too small	1: Set this parameter correctly 2: Reduce the load and check the motor and mechanical condition 3: Use an inverter with a larger power level
Input phase loss	Err12	1: The three-phase input power supply is abnormal 2: The driver board is abnormal 3: The lightning protection board is abnormal 4: The main control board is abnormal	1: Check and eliminate problems in peripheral circuits 2: Seek technical support 3: Seek technical support 4: Seek technical support
Output phase loss	Err13	1: The lead wire from the inverter to the motor is abnormal 2: The three-phase output 3: The driver board is abnormal 4: Module exception	1: Eliminate peripheral faults 2: Check whether the three-phase windings of the motor are normal and troubleshoot 3: Seek technical support 4: Seek technical support

Module overheating	Err14	1: The ambient temperature is too high 2: The air duct is blocked 3: The fan is damaged 4: The module thermistor is damaged 5: The inverter module is damaged	1: Lower the ambient temperature 2: Clean the air duct 3: Replace the fan 4: Replace the thermistor 5: Replace the inverter module
External device failure	Err15	1: Multi-function terminal DI input external fault signal 2: Virtual IO function input external fault signal	1: reset operation 2: reset operation
Communication fail	Err16	1: The host computer is not working properly 2: The communication line is abnormal 3: reserved 4: The communication parameter PD group setting is incorrect	1: Check the wiring of the host computer 2: Check the communication cable 3: Correctly set the type of communication expansion card 4: Correctly set the communication parameters
Contactor failure	Err17	1: The driver board and power supply are abnormal 2: The contactor is abnormal	1: Replace the driver board or power board 2: Replace the contactor
Current detection failure	Err18	1: Check Hall device abnormality 2: The driver board is abnormal	1: Replace the Hall device 2: Replace the driver board
Motor tuning failure	Err19	1: The motor parameters are not set according to the nameplate 2: The parameter identification process timed out	1: Set the motor parameters correctly according to the nameplate 2: Check the lead wire from the inverter to the motor
EEPROM Fault	Err21	1: EEPROM chip is damaged	1: Replace the main control board
Inverter hardware failure	Err22	1: Overvoltage exists 2: There is an overcurrent	1: deal with overvoltage fault 2: Handle according to overcurrent fault
Short to ground fault	Err23	1: The motor is shorted to ground	1: Replace the cable or motor
Cumulative running time reached fault	Err26	1: The accumulated running time reaches the set value	1: Use the parameter initialization function to clear the record information
User-defined fault 1	Err27	1: Input the signal of user 2: Input the signal of user-defined fault1 through the virtual IO function	1: reset operation 2: reset operation
User-defined fault 2	Err28	1: Input the signal of user 2: Input the signal of user-defined fault 2 through the virtual IO function	1: reset operation 2: reset operation
The cumulative power-on time reaches the fault	Err29	1: The cumulative power-on time reaches the set value	1: Use the parameter initialization function to clear the record information
Load drop failure	Err30	1: The running current of the inverter is less than P9-64	1: Confirm whether the load is disconnected or whether the parameter settings of P9-64 and P9-65 conform to the actual operating conditions

PID feedback loss fault during runtime	Err31	1: PID feedback is less than the set value of PA-26	1: Check the PID feedback signal or set PA-26 to an appropriate value
Wave-by-wave current limiting fault	Err40	1: Whether the load is too large or the motor is blocked 2: Inverter selection is too small	1: Reduce the load and check the motor and mechanical condition 2: Use an inverter with a larger power level
Switch motor failure while running	Err41	1: Change the current motor selection through the terminal during the operation of the inverter	1: Switch the motor after the inverter stops
Motor Over temperature fault	Err45	1: The temperature sensor wiring is loose 2: Motor temperature is too high	1: Detect temperature sensor wiring and troubleshoot 2: Reduce the carrier frequency or take other cooling measures to heat the motor
Wrong initial position	Err51	1: The deviation between the motor parameters and the actual is too large	1: Re-confirm whether the motor parameters are correct, focusing on whether the rated current is set too small
